FICTIONAL SAMPLE RÉSUMÉ · Alex Rivera and everything below are invented for a website practice project.

Alex Rivera

Cambridge, Massachusetts · alex.rivera@example.com (fictional placeholder)

Third-year computer science student testing language models against prompt injection and checking whether each claim in an answer is supported by its sources. Interested in research internships, undergraduate research roles, and early-career roles in AI security, model evaluation, trustworthy AI, and developer tools.

EDUCATION

B.S. in Computer Science, Massachusetts Institute of Technology (fictional profile) — Expected May 2027

RESEARCH EXPERIENCE

Undergraduate Research Assistant — Trustworthy Language Systems Group (fictional MIT group) — Sep 2025 – Present

- Prototyped evaluation scripts for measuring claim support in retrieval-augmented model answers.
- Reviewed model outputs and tagged evidence gaps using a shared annotation guide.
- Presented a monthly progress update; supervised by fictional Professor Maya Chen.

Research Intern — Secure AI Systems Lab (fictional summer research program) — Jun – Aug 2025

- Implemented test cases for indirect prompt injection in tool-using language-model agents.
- Compared defensive configurations in a controlled sandbox and documented limitations.
- Co-wrote an internal fictional report with two other student researchers; mentored by fictional Professor Daniel Brooks.

Student Research Fellow — Human-Centered AI Initiative (fictional MIT program) — Jan – May 2025

- Helped design a small study on how uncertainty messages affect user trust in AI answers.
- Built a demo that displayed source links alongside individual answer claims; mentored by fictional Professor Elena Morales.

SELECTED RESEARCH (ALL FICTIONAL)

- “Evidence Before Fluency: Measuring Unsupported Claims in Retrieval-Augmented Language Models” — research paper submitted to a fictional student research workshop, 2026
- “Prompt Injection Across the Tool Boundary: A Small-Scale Study of Agent Defenses” — preprint, 2025
- “When ‘I Don’t Know’ Helps: Calibrating Abstention in Student-Facing Assistants” — poster, fictional MIT Undergraduate Research Symposium, 2025
- “A Practical Taxonomy of Hallucination Reports for Product Teams” — technical report, 2024

PROJECTS AND VENTURE

VerityLayer — Co-founder and Product Lead, fictional student venture. Prototype that flags answer claims lacking clear support in retrieved documents and gives developers a review queue. Prototype stage; no customers, funding, or commercial deployment. — 2025 – Present

ClaimCheck (claim-level source verification), **PromptFence** (prompt-injection test harness), **AbstainWell** (uncertainty-aware Q&A demo) — fictional hackathon projects.

HACKATHONS AND AWARDS (EIGHT FICTIONAL WINS)

2026 · Grand Prize — ClaimCheck

2025 · First Place, Safety Track — PromptFence

2025 · Best Research Prototype — AbstainWell

2025 · Winner, Education Track — StudySignal

2024 · Best Use of Open Data — SourceTrail

2024 · First Place — ModelIncident

2024 · Best Student Team — RedTeamKit

2023 · Judges’ Choice — ContextCard

SKILLS

Research: experimental design, literature review, benchmark construction, error analysis, paper writing

AI and security: LLM red-teaming, prompt injection testing, hallucination measurement, retrieval-augmented generation, citation and provenance checks

Engineering: Python, PyTorch, TypeScript, FastAPI, PostgreSQL, Docker, Git

Product and communication: user interviews, prototyping, technical demos, research presentations, technical writing, peer mentoring, workshop facilitation

TALKS AND MENTORSHIP (FICTIONAL)

“Testing What the Model Claims” (2026) · “A First Red-Team Pass for Tool-Using LLMs” (2025) · “Make Uncertainty Useful” (2025) · Led the 75-minute session “From Research Question to First Experiment” (March 2026).

Fictional sample résumé created for website practice. All credentials, organizations, projects, and awards are invented; nothing here is endorsed by any organization.
